

Door Size Conversion Chart

Imperial sizes are normally 1 3/8 inches thick (35mm) for older doors, the two larger sizes may be 40mm or 45mm.

Metric doors are normally 40mm thick 1 5/8 for more modern doors.

All FD30 (1/2 Hour fire doors) are **1 3/4 inches - 45mm thick**. FD60 fire doors (1-hour fire doors) are typically **2 1/8 inches - 54mm thick**.

This increased thickness compared to FD30 doors provides additional fire resistance, allowing the door to withstand fire for up to 60 minutes
